

logpoint

*Easy to use, Agile by design, Intuitive by nature.
Plain and simple has never been so unique.*

Today, the majority of our communication takes place digitally – travelling through various networks, and across enterprises, organisations, nations and continents.

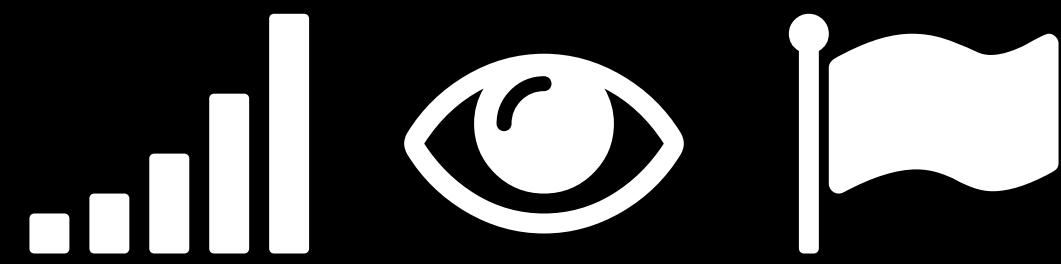

***This very communication
is now susceptible to crime,
espionage and terrorism.
Cyber security is now an
essential part of our lives
and business operations.***

With racing volumes of increasingly complex data coursing through our networks, effectively monitoring such digital crimes seems an impossible task.

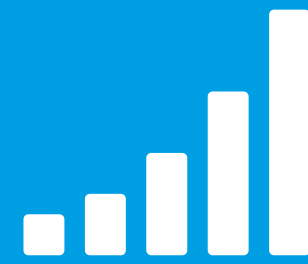

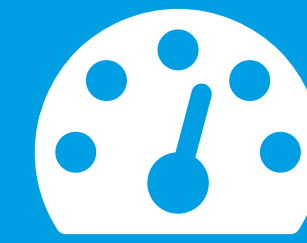

***At the same time,
we all have a
fundamental need
for privacy. No
one likes the idea
that someone else
may be watching
our information.***

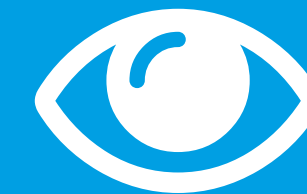

***But our digital
communication leaves
a log – a trail of critical
information about time,
place and routes.***

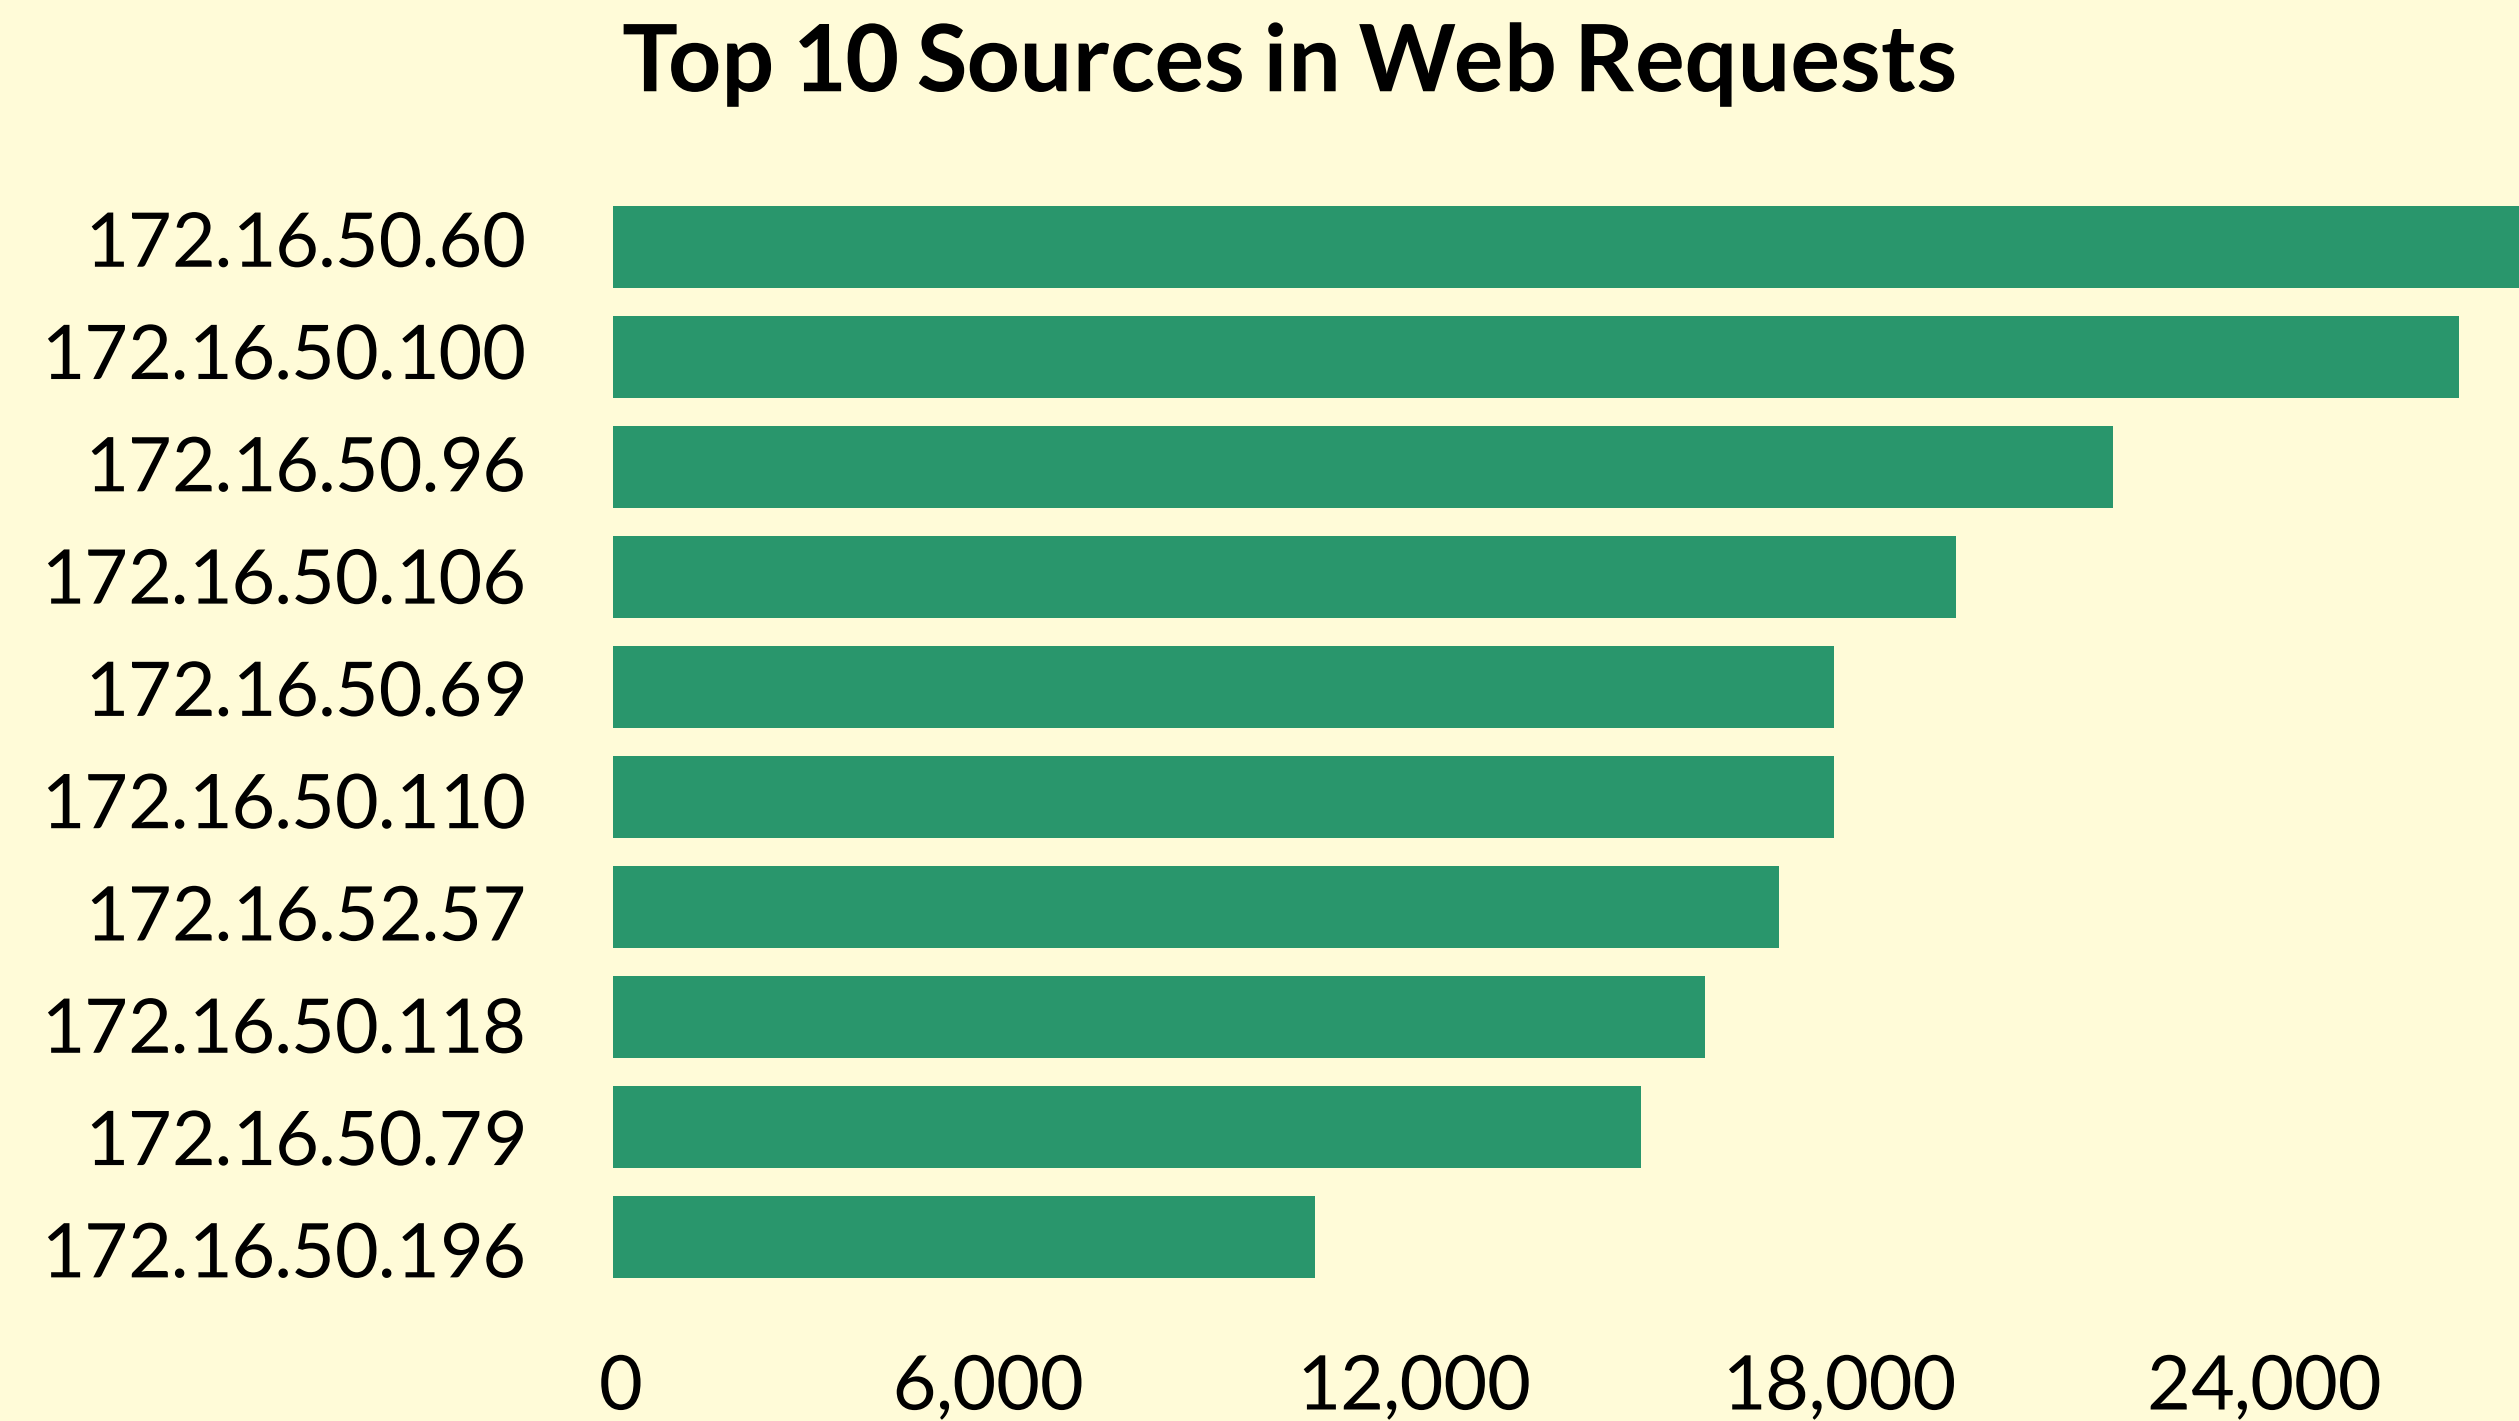

***LogPoint monitors the
behavior of this log traffic
without invading privacy.***

***LogPoint makes log analysis
and information assessment
an easy, swift process to
help you track and reveal
security breaches in your
network in real time.***

LogPoint constantly monitors your network's overall condition, identifying traffic bottlenecks and detecting attempts of intrusion – so you can take prompt action to prevent future disruption and protect your assets.

WWW.LOGPOINT.COM

LogPoint. SIEM. But different.

LogPoint A/S is pioneer in SIEM, founded in Denmark and introduced to the market in 2008. Today, over 250 clients globally are enjoying the most flexible yet simple platform available for reliably collecting, analysing, and monitoring their data. From applications, databases, and infrastructure, to sensitive assets, manufacturing systems, and security systems. Our sales and support offices are located throughout Europe and our strategic partnerships reach across the globe.

***Easy to use, Agile by design, Intuitive by nature.
Plain and simple has never been so unique.***
